

Agile AI in a Box — Partner Opportunity

The Idea

Agile AI in a Box is a virtual software team. Plain-English in → agile sprints → working software out. Proven methodology: I've already guided AI to deliver two complex apps (videos recorded) without writing a single line of code.

Proof So Far

- Strong founder credibility: 40 years PM consulting with IBM, GEIS, PwC
- Last project at IBM included a Watson AI delivery
- Five-time GE Mark Maker, Agile Delivery Excellence Award
- Published in ComputerWorld, Project-Management.com, and PM Today

The Gap

I'm a builder — and I want to finish this initial build myself, because the credibility comes from showing that one old project manager, with no coding, could do it. That's the story that proves the power of Agile AI in a Box.

But I need a partner to:

- Drive go-to-market and marketing
- Handle business operations and scaling
- Provide modest funding support (~\$5–10K/month).
- Step in as CEO/Operator while I remain founder and product lead

The Offer

- I'll offer meaningful equity (up to 49%, vesting over time) for a partner who supplies:
 - Business leadership and operations
 - Marketing and scaling expertise
 - me a modest stipend (\$5–10K/month) so I can stay fully focused on building
- Shared upside in a rapidly growing no-code AI market — projected ~\$4–5B today → \$25–30B by 2030 (25–38% CAGR; Grand View Research, Markets & Markets)

Why Now

AI agents are maturing. No-code demand is exploding. If I can do this at 72, anyone can. That's our message, and our market.

Call to Action

If you're an experienced operator or marketing leader who wants to run the business side of a credible AI startup — let's talk.
